

# HOW TO MEASURE A BOARD

## How to measure width:

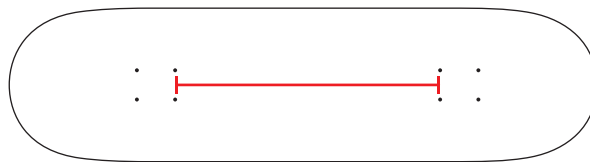

The **width** is measured straight across at the widest part of the board, usually the front truck area without bending the ruler into the concave.

## How to measure length:

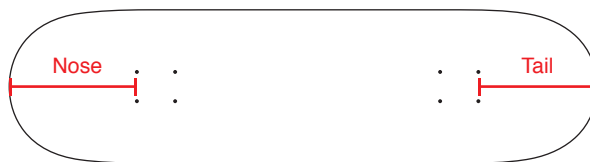

The **length** is measured by stretching the tape measure across the top of the skateboard from tip to tip bending the tape measure across the concave of the board.

## How to measure wheelbase:

The **wheelbase** is the measure of distance between one inside truck hole and another.

## How to measure the nose and tail:

**Nose length** is measured from the middle of the front truck holes to tip of the nose.

**Tail length** is measured from the middle of the rear truck holes to tip of the tail.
